

Midwest Fiber RECYCLING

The Journey of Recycled Materials

Recyclables are picked up at the curb.

Recycled materials are sorted at a facility like the one at Midwest Fiber Recycling.

Each material is baled for shipment to a mill.

Loads of recycled materials are loaded on trucks and trains to go to the mills.

The materials are either melted or pulped back into a form that companies can make into new things.

Companies make thousands of products out of recycled materials. These are just a few of the ones you can buy for the office.
